# **PROJECT DESIGN PHASE**

## PROPOSED SOLUTION TEMPLATE

Date	02/10/2022
Team ID	PNT2022TMID37312
Project Name	EMERGING METHODS FOR EARLY DETECTION OF
	FOREST FIRE
Maximum Marks	100

## PROPOSED SOLUTION:

S.NO.	PARAMETER	DESCRIPTION
1.	PROBLEM STATEMENT	Detection of forest fire and
	(PROBLEM TO BE SOLVED)	smoke in wildland areas is done
		through remote sensing-based
		methods such as satellites,
		high-resolution static cameras
		fixed on the ground, and
		unmanned aerial vehicles
		(UAVs).
2.	IDEA/SOLUTION DESCRIPTION	Detection of forest fires using
		CO2 sensors
		Existing detection methods
		such as satellite and optical
		systems can cover large areas;
		satellite systems identify
		infrared signatures, while
		optical systems look for smoke
		plumes.
3.	NOVELITY/UNIQUENESS	A fire detection system uses a
		smoke detector to detect a
		fire before it actually starts. An
		effective fire detection system
		eliminates damage by ensuring
		that a fire can be prevented
		before it even starts. A fire
		detector may also have a direct
		connection to an alarm
4.	SOCIAL IMPACT/CUSTOMER	monitoring center  Blocked roads and railway lines,
4.	SATISFACTION	electricity, mobile and land
	3/(13//(6/10/4	telephone lines cut, destruction
		of homes and industries, and
		the way of life of many
		communities are annual news
		stories and the balance of the
		catastrophe caused by fire
		results in a wealth of articles,
		editorials and communications.
5.	BUSINESS MODEL(REVENUE	Installing security and fire

# PROPOSED SOLUTION TEMPLATE

	INOT OBED BOLOTION TENNI LATE	
	MODEL)	systems contractors too often leave the profits from selling service agreements for other competitors to procure from their clientele. Learn how marketing a service sales strategy can generate consistent recurring revenue from existing customers, as well create new ones
6.	SCALABILITY OF THE SOLUTION	The completely modular system makes it easily expandable and business efficient for customized fire detection, with significant cost reductions.
