Fire detection system can limit emissions of toxic products created by combustion

What do they
THINK AND FEEL?
what really counts

major preoccupations

worries & aspirations

Detecting a Fire quickly and accurately

Sensor analyzes the data it collects right there on a spot

What do they
HEAR?
what friends say

what boss say

what influencers say

Detects the fire immediately sound the alarm, sending a signal to the cloud and notifying the emergency service

Automated early Fire detection protecting the global environment

What do they
SEE?
environment

friends

what the market offers

What do they
SAY AND DO?
attitude in public

appearance

behavior towards others

Limited amount of energy, the energy required for the data processing

PAIN
fears

frustrations

obstacles

Detection of the Fire conditions, two analytical methods are used namely : threshold ratio analysis and analysis using a machine learning algorithm

k means clustering algorithm characterized by high stabilization and versatility

GAIN
"wants" / needs

measures of success

obstacles

improve the Fire detection in real time and accutrate
